

MATH/STAT 389: Statistical Learning, Spring 2021, ONLINE

Instructor: Taylor Arnold
E-mail: tarnold2@richmond.edu
Website: <https://statsmaths.github.io/stat389-f21>
Office Hours: Following Class or By Appointment

Format:

The course will be taught remotely over Zoom. During the first week of the semester students will be placed into teams of around 3 people each. A large portion of the course work will be done using break-out groups within these teams. Materials and assignments for the class will be posted on the course website. All assignments will be submitted through shared Google Drive folders.

Class Components:

Course meetings will typically start with a short introduction to a new topic. We will then use breakout rooms to split into groups. Each group will then collectively work through questions posed as a R markdown notebook, or make progress towards the next group project. Teams will work together by picking a 'driver' (which should alternate between classes) to share their screen and take notes or write/run code.

Projects:

The core output of the course will be the completion of five projects. These will be assigned throughout the course of the semester and focus on the application of the course material to various textual corpora. Projects will be completed together in your class group. There will usually be plenty of class time to work on each project. We will also have time to present a subset of the projects to the rest of the class. Tentative due-dates and topics are posted on the course website and will be updated as needed.

Attendance:

Given the amount of group-work required during the course meetings, it is important for everyone to make an attempt to attend every class. With the exception of extended absences due to serious illness or family emergencies, students will receive a reduction in their final grade (including the possibility of a failing grade) after missing more than two class meetings.

Grades:

Each group's project will be graded as either Satisfactory/Unsatisfactory, along with extensive constructive feedback. At the end of the semester, each student will individually submit a self-assessment of their work in the course, how they contributed to each project, and what they have learned during the semester.

All students who have earned satisfactory grades on the five projects, and missed no more than two classes, will earn a grade of at least a B+. Grades of B+, A-, A, and A+ will be given according to each student's self-assessment in light of their projects and course participation.

Getting Help:

Given social distancing rules, I find the easiest way to answer questions is by finding time before, during, or after our scheduled class meeting times. I will always make a habit of staying after class as long as students have questions. If you want to meet right before class, just let me know. If you have extended questions, personal concerns, or are unable to meet on either side of the class meeting, please feel free to email me or ask in class for a dedicated appointment.
